

Farmer Marketplace

Phase 1 demo data and user flow

This document describes the sample records loaded by the UI's Load demo data button. The data lives in memory and resets when the API restarts.

Demo login

Role	Email	Password
Buyer	buyer@example.com	demo1234
Farmer 1	farmer.one@example.com	demo1234
Farmer 2	farmer.two@example.com	demo1234

Farms and farmer profiles

Farm ID	Farmer	Location	Profile
farm_demo_valley	usr_demo_farmer_1	1.2921, 36.8219	Green Valley Farm
farm_demo_sunrise	usr_demo_farmer_2	1.3102, 36.8127	Sunrise Fields

Produce lots

Lot ID	Product	Available kg	Price/kg	Farm
lot_demo_tomatoes	Tomatoes	60	0.70	farm_demo_valley
lot_demo_onions	Onions	150	0.45	farm_demo_valley
lot_demo_cabbage	Cabbage	60	0.55	farm_demo_sunrise

How the demo works

The UI is a small client for the existing FastAPI endpoints.

1. Load data. Click Load demo data. The API clears the in-memory store, creates the sample users, profiles, farms, lots, and order, and signs you in as the demo buyer.
2. Browse listings. The buyer sees active lots at GET /products. Each lot has a unique lot ID such as lot_demo_tomatoes.
3. Create an order. Click Use lot, enter a quantity, and submit. The UI sends POST /orders with the lot ID and quantity. The API checks availability and reduces the lot quantity.
4. Accept the order. Sign out and sign in as Farmer 1. Enter ord_demo_1 and click Accept order. The order changes from PENDING to ACCEPTED; the seeded order is already ACCEPTED.
5. Complete the order. Sign back in as the buyer, enter the order ID, and click Complete order. The order changes from ACCEPTED to COMPLETED.

Current sample order

Order ID	Buyer	Lot ID	Quantity	Status
ord_demo_1	usr_demo_buyer	lot_demo_tomatoes	20 kg	ACCEPTED

Run the app with `uvicorn app.main:app --app-dir api --reload`, then open `http://127.0.0.1:8000/`.
